SUBMITTAL GUIDE FOR GENERATORS

1. Provide wiring information for the generator including a one-line diagram for your specific installation.
2. Provide three sets of equipment specifications for the generator.
3. Provide three sets of equipment specifications for the transfer switch. If it is being used as a service disconnect, we need confirmation of this in the specifications.
4. Identify if this is LP or Natural Gas. If it is natural gas, a mechanical permit will be required.
5. Provide three sets of drawings showing the location of the generator in relation to the house and openings such as doors and windows. Please note that if the generator is to be installed less than 5 feet from the building, the manufacturer's specifications submitted must indicate this is permitted.
